

Company Profile

HOBRE INSTRUMENTS BV - Total Analyzer Solutions

Hobre Instruments is a leading company in the field of design, manufacturing, marketing and maintenance of on line analyzers, sample systems and complete turnkey analyzer systems. Our company was established in 1978 and has its main focus in serving the Oil and Gas industry and Petro-Chemical sector world wide, with a variety of solutions.

Analyzers

For more than 30 years we supply first class on-line analyzers for demanding applications in most industries. A variety of well recognized manufacturers are distributed successfully ever since the company was founded in 1978. Currently the portfolio includes physical property monitors, H₂S & Sulphur analyzers, Compact BTU chromatographs for natural gas and H₂S/ SO₂ ratio tail gas analyzers.

We manufacture and support worldwide the following reliable process analysers:

- Metorex on-line EDXRF analyzers for element analysis in liquids
- Nicosys smouldering detection system for early fire detection in milk- and coffee Spray Dryers
- Wobbe Index, Heating Value (BTU)and Combustion Air Requirement analyzers
- Salt in crude analyzers in accordance with ASTM D3230

For applications in the Oil and Gas Production we have agreements in place with leading Process Analyser Manufacturers to meet your specific performance requirements.

Total Analyzer Solutions

- Combustion Air-fuel ratio control and Fuel Gas Mixing
- H₂S and Sulphur
- Physical property and Sulphur in Oil and Gas processing
- Produced Water Oil in Water measurement
- H₂S/SO₂ ratio, Sulphur Pit, and Feed gas analysers for SRU 's
- Quality metering systems for Oil and Gas .
- Complete Analyser Packages to clients requirements in Gas , Oil , and Chemical Plants

Services

- Feasibility study
- Engineering
- Project management
- Documentation
- Commissioning, SAT, start-up, and training
- Maintenance and repair
- Spare parts supply

Our Engineering and service team features a team of knowledgeable and experienced engineers that design and construct analyzers, pre-conditioning systems, sample conditioning systems, sample recovery systems and complete analyzer system packages for a broad range of gas and liquid applications.

We work in close relation and cooperation with the end user/contractor and analyser manufacturer to come to the best solution in compliance with the relevant standards and classifications.

Our qualified and experienced service engineers support our customers around the world. With this group of well trained engineers we offer: corrective and preventive maintenance , start ups, commissioning, site surveys, training, and Factory and Site Acceptance Testing for on-shore or off shore analyzer applications.

A strategic level of spare parts is kept to support products delivered and to keep delivery times for spare parts and consumables as short as possible to minimise down time of your analyzers.
